RE: Med/AU Classification of Edibles in CATS

It has come to our attention that when lab results are entered for edible products as the total mg per package (as instructed), the usable weight is accurately reflected in the Cannabis Analytic Tracking System but “adult-use” products may be incorrectly classified as “medical only”.

If this happens, please reach out to Vanneza Romero at vanneza.romero@biotrackthc.com and Jason Herman at jason.herman@biotrackthc.com at BioTrack and cc: dcp.cannabislicensing@ct.gov. BioTrack has assured us they will respond swiftly to all requests to make these corrections in the system.

We apologize for the inconvenience and thank you for your cooperation,
Jen
